

IOSH Level 3 Certificate in Safety & Health for Business

Invest in the future of safety and health

The Ofqual-regulated Level 3 Certificate in Safety and Health for Business has been developed by IOSH in collaboration with awarding body NCFE. It is cost-effective, time-efficient, regulated and highly relevant for businesses.

It has been designed with employers for employers to meet their needs and grow the knowledge and soft skills their managers, supervisors and up-and-coming safety and health professionals require. This distinctive business-relevant qualification has been developed with input from leading organisations and thought-leaders across key sectors worldwide. Safety and Health for Business is taught in flexible, engaging ways. It can also take less time to complete than other regulated qualifications,

meaning delegates are able to spend up to a quarter less time away from the workplace.

The qualification builds on Managing Safely, IOSH's tried-and-tested training course to equip supervisors and managers with the right knowledge and skills to evaluate safety systems, identify areas for improvement, implement control measures and reduce risk. Delegates must have completed this within the last three years.

Successful completion of this course enables delegates to apply for Associate or Technical IOSH membership giving access to these benefits and more:

- a global community of like-minded professionals leading positive change
- chance to enhance their knowledge with access to technical expertise
- opportunity to build their professional network and connections
- improved career prospects enabling them to maximise their potential.

Qualification outline and assessments

Each of the three units is assessed in a unique, more flexible designed to test a range of soft skills vital to both delegates and their employers.

Unit 01

Safety and health management in an organisation
Focused on the value of workplace health and well-being, including health hazards, safety hazards, health assessment, global trends and good practice, including CPD.

Assessment

Delegates develop and write a business case to implement an enhanced safety and health management system within an organisation, putting theory into practice in a way relevant to all sectors, organisations and workplaces.

Unit 02

How to influence a safety and health culture within an organisation
Going beyond compliance, this unit gives insights into and teaches ways of delivering positive safety culture change, tackling behavioral and operational challenges to boost business performance and strengthen corporate governance.

Assessment

Delegates complete a project researching organisational health and safety culture, using primary and secondary research methods to collect data. They produce a report evaluating the existing safety culture and recommending an improvement plan.

Unit 03

A strategic, business-focused approach to safety and health
This unit explores organisations, their functions and how to effectively influence success. This includes topics such as accountability, ethics, compliance, managing uncertainty, and other long-term strategic megatrends affecting modern business.

Assessment

The delegate analyses the main functions and aims of an organisation, including how strategic drivers affect its operation, then develops and delivers a presentation they could use to brief a senior management team.
